

## City of Houston Resiliency Projects

# Kashmere Gardens Multi-Service Center

The City of Houston is taking significant steps to enhance neighborhood resiliency. Starting with a microgrid deployment in one of the city's outage-prone areas, Kashmere Gardens, this initiative supports the city's growth and community safety while reducing environmental impact. The generator will be installed at the Kashmere Gardens Multi-Service Center, which is vital for delivering cooling, warming, Wi-Fi, and emergency services during extreme weather events.

### Enchanted Rock natural gas generation:

- Provides instantaneous backup power to the center when the main grid fails
- Delivers unmatched performance - operated and maintained by Enchanted Rock
- Leverages natural gas distributed generation over traditional diesel backup
- Offsets costs through market participation with ERCOT
