

THE CLIENT

This Enchanted Rock customer is a pioneer and innovator in the field of industrial sensor, explosion protection and automation technology. Their newest facility, built in Summer 2016, serves as a state-of-the-art warehouse and manufacturing plant and hosts a Solution Engineering Center and customer training area. Additionally, the facility showcases the manufacturer's sensors at work.

THEIR PROBLEM

Power outages bring manufacturing lines to an unexpected halt, which can translate into lost product, breakdown of equipment and lost production time. These interruptions can cost this client thousands of dollars and potentially lead to lost customers that do not receive their products on time. They searched for a solution that could keep the lights on and production lines running, even in times of a power outage.

MANUFACTURING FACILITY

EROCK SOLUTION

In Fall of 2016, this client signed a Master Service Agreement with Enchanted Rock for full backup power for their facility. They can now continue to operate and serve their customers without the threat of a power outage disrupting operations.

RESULTS

The client's system was commissioned in Summer 2017 and has provided uninterrupted power to the facility during outages. Enchanted Rock powered their facility for over 105 hours during Hurricane Harvey in 2017, protecting them from potential outages caused by the storm. Without this backup power, this client was at risk of thousands of dollars in lost product and production time.
